

Crane Signals

Hoist - Hold arm out, bent at the elbow so that your hand and index finger are pointing in the air. Move your hand in a small circle.

Lower - Extend your arm downwards with your index finger pointing down. Move your hand in a small circle.

Bridge Travel - Extend your arms with your palms facing outwards. Make a pushing motion in the direction you want the crane to travel.

Trolley Travel - Hold your hand up, with your fingers closed and your thumb pointing in the direction you want the crane to travel. Move your hand horizontally, like a hitchhiker.

Stop - Stick your arm straight out to the side with your palm down. Keep your hand still.

Emergency Stop - Stick your arm straight out to the side with your palm down. Move your hand rapidly right and left.

Multiple Trolleys - When there is more than one hoist, hold up one to two fingers, to show which one you want moved, then give the other signal for movement.

Move Slowly - Use one hand to give the regular motion signal, while the other hand is held still in front of the signal hand.
