

The operator of the freight yard sits in a control tower and works the switches so that the train cars go on to the right tracks. They have lists that tell them where each car needs to go. Some freight trains are made up of one kind of car. Other freight trains are made up of many kinds of cars.

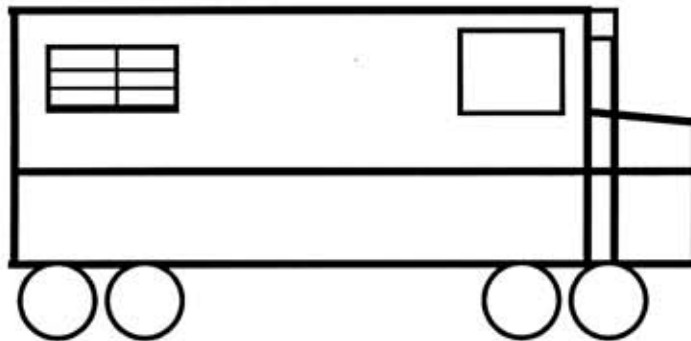

Draw the operator working the switches.

3.

---

It's time to read about the different train cars on a freight train. The first car you will see coming down the track is the locomotive. It is the engine of the train.

An engineer will be working on the locomotive. He or she works the speed of the train, watches the track signals and tracks.

Draw an engineer moving the train.
